

# Migrate Data Between Accounts

Often new LastPass Enterprise users already have an existing account under their work email address which contains both personal and work-related data. In this case, it is easy to create a new Personal account and migrate the data between the two. Once the two accounts are linked, data can be migrated from the Enterprise account to the new Personal account through the drag and drop method between folders. The steps are as follows:

## Setting Up to Migrate

1. Create a new Personal account using your personal email address: [https://lastpass.com/create\\_account.php](https://lastpass.com/create_account.php)
2. Link your personal account to your work account (log into your Enterprise account -> vault -> Link Personal Account. [Click here to learn more about linking accounts.](#))
3. Look for the new personal folder in your Enterprise vault (the folder name will be your personal username)
4. Drag and drop any relevant sites from the Enterprise folder to any Personal folders (or right-click > move to folder)

# FAQs

## **Can I block the migration of data from Enterprise to Personal?**

Yes, this can be prevented by enacting the [policy](#) to prohibit updating personal account, located under the 'Limit Features' heading.

## **Can my employees move data from Shared Folders to their Personal account?**

Data cannot be moved directly from a Shared Folder to the personal account, but it can be moved from the Shared folder to the Enterprise account, and then to the personal account. This too can be prevented via policies and user permissions.

## **Can I prohibit my employees from linking their personal accounts?**

Yes, by implementing the policy "Prohibit Linking Personal Account", you can prohibit users from linking their personal accounts with their Enterprise accounts.

## **Is there a way I can prevent users from exporting their Vaults?**

Several policies can be configured so that Employees are restricted from exporting, importing, or sharing credentials from their Enterprise Vaults. Our [policies](#) page details these specific restrictions.
